Open standards, client communications, partners & community

Interoperability earns partner trust. Community loyalty is what makes an ecosystem outlast any one project.

Interoperability & Standards

- **Design for Accessible, Safer Experiences**
- Build mobile and XR worlds on open spatial standards (e.g. open, browser native XR, IWSDK) to augment private app store releases
- **Produce with open standards** so underlying work engaged in the client investment outlives any single vendor or production relationship
- Stay active in extensions and new formats with groups like the Metaverse Standards Forum.

Community & Loyalty

- Simple in-platform paths to participate: claim a page, submit a world, share, get discovered.
- **Design for Engagement and Repeat Visits** shared with friends; discovery follows virality
- A community that loves the platform becomes the sales team with engagement, referrals, retention and growth of new experiences.
- Production partner network grows to bring together a wide array of old and new allies
